

Job Title: Full Stack Developer

Location: Remote

Job Description

We are seeking a talented Full Stack Developer to join our dynamic team. In this role, you will be responsible for designing, developing, and maintaining web applications and APIs that power our core services. You will collaborate closely with front-end and back-end teams, delivering efficient and scalable solutions that enhance user experience.

Key Responsibilities:

- Collaborate with designers, product managers, and backend engineers to build and optimize web applications and services.
- Develop responsive and user-friendly front-end interfaces using modern JavaScript frameworks such as React, Angular, or Vue.
- Build and maintain RESTful APIs and microservices using Node.js, Express, or similar frameworks.
- Design and implement robust backend solutions to support complex business requirements.
- Manage data interactions with databases, including relational databases like PostgreSQL/MySQL and NoSQL databases like MongoDB.
- Implement authentication, authorization, and security best practices across applications.
- Optimize web applications for speed and scalability.
- Troubleshoot, debug, and upgrade software to ensure optimal functionality and performance.
- Collaborate with DevOps to deploy and manage applications on cloud platforms like AWS, Google Cloud, or Azure.

Required Skills:

- Proficiency in JavaScript (ES6+) and experience with front-end frameworks like React, Angular, or Vue.
- Strong understanding of backend technologies such as Node.js, Express, and RESTful APIs.
- Experience with SQL and NoSQL databases (e.g., PostgreSQL, MySQL, MongoDB).
- Familiarity with cloud platforms (AWS, Google Cloud, or Azure) for application deployment.
- Solid understanding of HTML, CSS, and front-end development principles.
- Experience with version control tools like Git and GitHub.
- Strong problem-solving skills and attention to detail.
- Excellent communication and teamwork skills.

Preferred Qualifications:

- Bachelor's degree or higher in Computer Science, Software Engineering, or a related field.
- Familiarity with DevOps tools and containerization technologies like Docker and Kubernetes.
- Experience with CI/CD pipelines to streamline deployment and testing.
- Knowledge of CSS, SQL, or Backend for advanced application functionality.
- Familiarity with testing frameworks like Jest, Mocha, or Cypress for front-end and back-end testing.
- Experience in a startup or fast-paced development environment.
